Trend of Allergy-related Disorders

Box 1 – Time trends in allergy-related disorders in children aged 0–5 years referred to an Australian Capital Territory private practice

- Allergic rhinitis
- Anaphylaxis
- Asthma
- Eczema
- Food allergy
- Urticaria
Trend of Autoimmune-related Disorders

Etiology

• Cause: UNKNOWN
  – Genetics
  – Sex (more female than male)
  – Others ????
“When *zheng* (upright) *qi* is present, pathogenic factors cannot attack.”

*Su Wen* (Basic Questions), 2nd century A.D.
Overview

• Pathogens
  – Micro-organisms (bacteria, virus, fungus, parasites)
  – Environmental chemicals and toxins
  – Foods that trigger allergy and autoimmunity

• The immune system

• Autoimmune diseases
  – Connective tissues (skin, joints, glands, blood vessels)
  – Internal organs (thyroid, intestines, heart, lung, CNS)
## Microbes associated with autoimmunity

<table>

</tbody>
</table>
Vaccination

- Diphtheria, tetanus and polio vaccines have a dangerous link with a number of autoimmune disorders.
- Measles, mumps and rubella vaccines linked to rheumatoid arthritis.
- Influenza vaccine linked to type 1 diabetes in children.
- Mercury (thimerosal) is still present in flu vaccines, but has been removed from most other vaccines.
  - JAMA, 1994
Trend in diseases treated by vaccines
Environmental chemicals and toxins

- 287 industrial chemicals were found fetal cord blood collected by American Red Cross from ten newborn infants from around the US.
- Chemicals included pesticides, phthalates, dioxins, flame retardants, by-products of Teflon, and many others.

– Center of Disease Control (CDC), 2004.
Air pollution

- Car exhaust
- Jet fuel exhaust
- Mining plants
- Coal burning plants
- Brush and forest fire
- Earthquake
Air pollution

- Ozone, carbon monoxide, nitrogen dioxide
- Toxic heavy metals (arsenic, cadmium, lead, mercury, copper, chromium, nickel, zinc)
- Solvents and petrochemicals (acetylaldehyde, benzene, benzopyrene, chloroform, formaldehyde, napthalene, toluene, trichloroethylene, xylene)
Jet Fuel and Air Travel

- Fatigue from travel and jet lab
- Dehydration from radiation and dry air
- Toxicity from kerosene-based jet fuel exposure
- Increased risk of infection from enclosed environment
Chemical cleaners

• Chemical cleaners used everyday in household makes indoor air five times more polluted than outdoor air.
• This is true even in New York and Los Angeles.
• Use only white vinegar and baking soda!
  – EPA
Water pollution

• 145 total contaminants
• 35 agricultural pesticides
• 31 urban lawn chemicals
• 100 industrial heavy metals and petrochemicals
• 30 water treatment byproducts
• Others
  – www.ewg.org
New Carpet

- Acetone
- Bis(2-ethylhexyl) phthalate
- Benzene
- Caprolactam
- Diethylene glycol
- P-dichlorobenzene
- Formaldehyde
- Hexane
- Styrene
- Toluene
- Vinylcyclohexene
- Xylenes
Old Carpet

• Dust and mold that is impossible to remove
Cosmetics

- Skin is the largest organ in human body.
- Avoid cosmetics with parabens, phthalates, sodium laureth, sodium laurel sulfate, petrolatum, cocamide DEA, diazolidinyl urea, toluene, and triethanolamine.
- Avoid synthetic colors and fragrances in cosmetics, perfumes and colognes.
Hair dye and nail polish

• Hair dye causes three times higher risk of lupus for those who use them.

• Nail polish (contains phthalates, formaldehyde or toluene) is toxic when applied, and is also toxic when removed (with solvents).
Polybrominated diphenyl ethers (PBDE)

• PBDE: flame retardant used in just about everything, such as carpet, bedding, chair, fabric, plastic, etc.
• PBDEs are not chemically bound to plastics, foam, fabrics, or other products, making them more likely to leach out of these products.
• Persistent, bioaccumulative, and dangerous neurotoxin to humans, animals, and the environment.
• Babies and toddlers have highest levels of PBDE because they crawl on carpet and chew on everything.
  – EPA
Perfluorooctanoic acid (PFOA)

- PFOA (C8) is a fire-resistant and oil-, stain-, grease-, and water-repellent chemical (i.e., Teflon).
- Used in non-stick cookware; waterproof, breathable membranes for clothing; flooring, carpet guards, grease-resistant french fry boxes, coffee cups, and many industry segments, including the aerospace, automotive, building/construction, chemical processing, electronics, semiconductors, and textile industries.
- Found in the blood of 96% of Americans; and it’s half-life of 4.4 years.
- Increased risks of hypercholesterolemia, thyroid disease, and reduced fertility.
- Increased risks of testicular and kidney cancer
  - American Cancer Society (ACA)
Dioxin

- Dioxin is a by-product formed by burning chlorine-based chemical compounds with hydrocarbons. The major source of dioxin in the environment comes from waste-burning incinerators, factories which use chlorine bleaching in their process and with the production of paper or plastics. It is also present in exhaust fume from diesel trucks and buses.
- Dioxin accumulates in food (mainly meat and dairy products, fish and shellfish), which then accumulates fatty tissue of human.
- Dioxins are highly toxic and can cause reproductive and developmental problems, damage the immune system, interfere with hormones and also cause cancer.
- Dioxin crosses the placenta from mother to babies.

- World Health Organization (WHO)
Formaldehyde (FA)

- Widely used in industrial and medical settings and as a sterilizing agent, disinfectant, and preservative.
- Found in the polluted atmosphere of cities, domestic air (e.g., paint, insulating materials, chipboard and plywood, fabrics, furniture, paper), and cigarette smoke, diesel and gas exhaust, antiperspirants, cosmetics, hair care, soap, etc.
- Potent carcinogen as it cross-links to DNA

Formaldehyde by-products

- para-formaldehyde
- hexamethylene tetramine
- DMDM hydantoin
- polynoxyline
- dimethylolurea
- preventol D1
- preventol D2
- preventol D3
- quaternium 15
- bakzid
- bakzid P
- parmetol k50
- grotan BK
- imidazolidinyl urea
- diazolidinyl urea
- 2-bromo-2-nitropropane-1,3-diol
- KM 103
- biocide DS 5249 (Proxel T)
- tris hydroxymethyl nitromethane (Tris nitro)
- hydroxymethylglycinate (Suttocide A)
Bisphenol A (BPA)

• BPA is a structural component that protect the food from directly contacting packaging surfaces, such as water bottles and metal can coatings, and has been used since the 1960s.

• It is also used as a plasticizers used in many plastic products, including helmets, dental sealants, eyeglasses, etc.

• It’s in the blood of 90% Americans
  – www.fda.gov
BPA toxicities

• Hormone levels. It acts like a hormone in the body, disrupting normal hormone levels and development in fetuses, babies, and children.
• Other conditions: heart problems, obesity, diabetes, ADHD, and others.
  – www.webmd.com
Phthalates and parabens

- Phthalates and parabens are plasticizers that make cosmetics creamier, plastics more flexible and less brittle, and toys more pliable.
- Easily leech out from products
- Present in almost all Americans
- May cause infertility, testicular dysgenesis, obesity, asthma, and allergies, as well as leiomyomas and breast cancer.

Polyvinyl chloride (PVC)

- Used in plastic pipes, wires, cable coatings, packaging materials
- Acute (short-term) toxicity through inhalation: central nervous system effects (CNS), such as dizziness, drowsiness, and headaches in humans.
- Chronic (long-term) toxicity through inhalation and oral ingestion: liver damage and liver cancer, increased risks of lupus, scleroderma, and rheumatoid arthritis
  - EPA
Trichloroethylene (TCE)

- Cleansing solvent used to wash planes, tanks, trucks, and machinery. Commonly used in dry cleaning. TCE is present in air and in tap water.
- CNS side effect, such as dizziness, headaches, confusion, euphoria, facial numbness, and weakness.
- Liver, kidney, immunological, endocrine, and developmental toxicities,
- Cancer in kidney, liver, cervix, and lymphatic system.
  - EPA
Foods

- Heavy metals
- Pesticide
- Mycotoxins: aflatoxins and ochratoxins
- Processed foods
- GMO foods
- Food allergens
- Gluten
- Coffee
- Leaky gut syndrome
Lead

- **Sources:** leaded gasoline, water conveyed by lead-pipes, cans, lead-based paint, and improperly glazed ceramics and cookwares.
- Oral ingestion of foods contaminated with lead is the primary source of poisoning.
- Clinical manifestation of lead poisoning include abdominal pain, irritability, lethargy, anorexia, pale face, ataxia, slurred speech, and in severe cases, convulsions and coma. [i],[ii]

Mercury

• Sources: thermometers, batteries, dental amalgams, preservative in vaccines, manufacturing of certain electronics, plastics, fungicides, and germicides. These products may subsequently contaminate the water and soil, and become present in the foods (such as tuna and swordfish which concentrate methyl mercury at high levels).

• Toxic effects of mercury poisoning include sensory impairment (vision, hearing, speech), disturbed coordination, and damage to the internal organs (brain, kidneys, and lungs). [i], [ii]

Arsenic

- Sources: Arsenic pollute the environment via mining, smelting, and burning of coal, and arsenic contaminate the water and soil when it is used to manufacture herbicide and pesticide, or added to feed of poultry and livestocks to promote growth. In turn, as humans are exposed to arsenic via breathing, drinking and eating.

- Clinical manifestations of toxic reactions include muscle weakness, hyperpigmentation of the skin, hyperkeratosis, exfoliative dermatitis, edema, sensory and motor polyneuritis, and inflammation of respiratory mucosa. [i],[ii]

Cadmium

- Cadmium is a valuable metal, and is mined and used in industrial production of many products, such as electroplating and galvanization and its use in plastics, paint pigments (cadmium yellow), and nickel-cadmium batteries. If these products are not properly disposed, cadmium will contaminate water and soil in the environment. In turn, cadmium has been found at high concentration in various types of foods, including grains, cereals, leafy vegetables, shellfish, and liver and kidneys from animals.

- Clinical manifestations of cadmium poisoning include yellow discoloration of the teeth, emphysema, changes in liver functions, anemia, renal disorder, and osteomalacia. [i],[ii]

</table>
Pesticide

- Organochlorine
- Organophosphorus
- Pyrithroids
- Toxicities: dyspnea, respiratory depression, pulmonary edema, cyanosis, loss of sphincter control, bradycardia or tachycardia, cardiac ischaemia, cardiac dysrhythmias, seizures, convulsions, and coma
Organochlorines

- Organochlorines are insecticides that contain chlorinated ethane derivatives. There are at least 33 different organochlorine insecticides, including endrin, dieldrin, aldrin, quintozene and dichlorodiphenyltrichloroethane [DDT].
Organophosphorous

- Organophosphorous are insecticides that contain a phosphorus compound. There are over 100 different types of organophosphorous pesticides, including malathion and parathion. As pesticides, organophosphorous may be used by itself, or in conjunction with organochlorines. Organophosphorous pesticides kills insects that adversely affect foods, crops and buildings.
Pyrethrums

- As botanical insecticides, pyrethrums are derived from flowers of a plant called *Chrysanthemum cinceraariaefolium*. Examples of pyrethrum pesticide include: bifenthrin, cyfluthrin, cyhalothrin, cypermethrin (and isomers), deltamethrin, fenpropothrin, fenvalerat and esfenvalerat (sum of isomers), fluvalinat, flucythrinat, permethrin, phenothrin, resmethrin, and tetramethrin.

APR 10 2014

m/s: Manufacturer's specifications.
Pesticides and Insecticides

• Greater quantities of pesticides and insecticides, such as weed killer atrazine, is applied to suburban area than agricultural land.

• Induces autoimmune disorders
  – Environmental Protection Agency (EPA)
Aflatoxins

- Aflatoxins are toxic metabolites produced by certain strains of fungi, namely *Aspergillus flavus* and *A. parasiticus*.

- Foods and feeds most likely to be affected by aflatoxins include corn and corn products, peanuts and peanut products, cottonseed, grains, tree nuts (Brazil nuts, pecans, pistachio nuts, walnuts, almonds), milk, cheese, figs, and spices.[i],[ii]

Aflatoxins

- Bai Zi Ren (Semen Platycladi)
- Chen Pi (Pericarpium Citri Reticulatae)
- Da Fu Pi (Pericarpium Arecae)
- Da Zao (Fructus Jujubae)
- Gou Qi Zi (Fructus Lycii)
- Gou Teng (Ramulus Uncariae cum Uncis)
- He Ye (Folium Nelumbinis)
- He Ye (Folium Nelumbinis)

Ochratoxins

- Ochratoxins are toxic metabolites produced by certain strains of fungi, namely *Aspergillus ochraceus*, *Aspergillus alliaceus* and *Penicillium verrucosum*.[i]

- Ochratoxins are commonly found in foods such as grape juice, coffee, wine, beer, cereals (e.g., wheat, maize, rye, barley, and oats), dried vine fruit (e.g., raisins and currants), corn, peanuts, grains, cottonseeds, rice, and beans.[ii],[iii]

Ochratoxins

- **Gou Qi Zi** (Fructus Lycii),
- **Gan Cao** (Radix et Rhizoma Glycyrrhizae)
- **Zhi Gan Cao** (Radix et Rhizoma Glycyrrhizae Praeeparata cum Melle)

Processed foods

- Processed foods with nitrates, nitrites, benzoates, BHA, BHT, MSG, parabens and sulfites. They are contain excessive salt and are overly acidic.

- Food dye, FD&C yellow no. 5 is linked with allergy and asthma.

- Fast food, TV dinner, microwave food, canned food, and foods with artificial color and flavors, MSG, aspartame, high fructose corn syrup.
GMO foods

- **Corn**
  - 96% of all corn are GMO
  - High fructose corn syrup
  - Cooking oil made from corn

- **Soy**
  - 94% of all soy are GMO
  - Baby formula made from soy

- **Sugar and aspartame**
  - Aspartame turns into formadehyde at 86F

- **Canola oil**
  - GMO oil
Eight Major Groups of Allergens

1. Milk
2. Eggs
3. Fish
4. Peanuts
5. Crustacean shellfish
6. Tree nuts
7. Soybeans
8. Wheat
Major Groups of Allergens (Shellfish)

- **Crustacean shellfish**: shellfish with a hard shell and no backbone, such as crab, crayfish, lobster, prawns and shrimp
- None in Chinese materia medica
- Possible cross allergy
  - *Mu Li* (Concha Ostreae)
  - *Ge Qiao* (Concha Meretricis seu Cyclinae)
  - *Hai Piao Xiao* (Endoconcha Sepiae)
  - *Zhen Zhu* (Margarita)
  - *Zhen Zhu Mu* (Concha Margaritiferae)
  - *Shi Jue Ming* (Concha Haliotidis)
  - *Wa Leng Zi* (Concha Arcae)
Major Groups of Allergens (Tree Nuts)

- **Tree nuts (high risk):**
  - *Bai Guo* (Semen Ginkgo)
  - *He Tao Ren [Hu Tao Ren]* (Semen Juglandis)
  - *Song Zi Ren* (Semen Pini)
  - *Li Zhi He* (Semen Litchi)

- **Tree nuts (possible cross-allergy):**
  - *Tao Ren* (Semen Persicae)
  - *Yu Li Ren* (Semen Pruni)
  - *Bai Zi Ren* (Semen Platycladi)
  - *Ku Xing Ren* (Semen Armeniacaе Amarum)
    - *Shen Qu* (Massa Fermentata),
    - *Jian Shen Qu* (Massa Fermentata Praeparata)
    - *Ban Xia Qu* (Rhizoma Pinelliae Massa Fermentata)
Major Groups of Allergens (Wheat)

- **Wheat**
  - *Xiao Mai* (Fructus Tritici)
  - *Fu Xiao Mai* (Fructus Tritici Levis)

- **Herbs that contain wheat**
  - *Shen Qu* (Massa Fermentata)
  - *Jian Shen Qu* (Massa Fermentata Praeparata)
  - *Ban Xia Qu* (Rhizoma Pinelliae Massa Fermentata)

- **Herb that could be made from wheat**
  - *Yi Tang* (Maltosum): generally made from rice or glutinous rice (other sources could be from barley, wheat, millet or corn.)
Major Groups of Allergens (Soybeans)

• Soybean herbs
  – *Dan Dou Chi* (Semen Sojae Praeparatum)

• Herbs that may be processed with soybean
  – *Zhi He Shou Wu* (Radix Polygoni Multiflori Praeparata) - if processed with black soybean
  – *E Jiao* (Colla Corii Asini) - if soya-bean oil is used to thicken glue
Gluten

- Non-GMO wheat
- 1 in 100,000 with allergy

- GMO wheat
- 1 in 133 with allergy
  - Contains gluten peptide (glia-α9)
  - Glyphosate
The Real Reason Wheat is Toxic
(it's not the gluten)
Figure 1. Hospital discharge diagnosis (any) of celiac disease ICD-9 579 and glyphosate applications to wheat (R=0.9759, p=1.862e-06). Sources: USDA:NASS; CDC. (Figure courtesy of Nancy Swanson).
Gluten

- **Food:** Wheat, rye and barley.
- **Herbs:**
  - *Xiao Mai* (Fructus Tritici) - wheat
  - *Fu Xiao Mai* (Fructus Tritici Levis) - floating wheat
  - *Yi Tang* (Maltosum) – sugar from rice, barley, wheat, millet or corn
  - *Shen Qu* (Massa Fermentata) - contains wheat
  - *Jian Shen Qu* (Massa Fermentata Praeparata) - contains wheat
  - *Ban Xia Qu* (Rhizoma Pinelliae Massa Fermentata) - contains wheat
Coffee

- There are over 1,000 chemical compounds in roasted [burned] coffee. Of 28 tested, 19 are carcinogenic.
- “One cup of coffee gives you more carcinogen than you get in foods in a year!”
  – Dr. Bruce Aimes, toxicologist, UC Berkeley
Carcinogens

- Cigarette smoking > 30% of all cancer
- Hormones > 30% of all cancer

- Dr. Bruce Aimes, toxicologist, UC Berkeley
Leaky Gut Syndrome

- Due in part to chemicals, artificial preservatives, dyes, GMO-foods and NSAIDS.
- Flood gate opens for allergen and antigen to enter the body

_Treating Leaky Gut Syndrome in a TCM Practice_, Jake Paul Fratkin, OMD, L.Ac.
“The skilled practitioner treats before an illness occurs, not once it has occurred.”

*Ling Shu* (Divine Pivot), 2nd century A.D.
Solution

• Stop the influx of all pathogens
  – Prevent infection
  – Avoid environmental chemicals and toxins
  – Consume organic and whole foods

• Eliminate the accumulation of pathogens
  – Increase blood circulation
  – Facilitate liver metabolism
  – Enhance kidney elimination

• Treat diseases and restore wellness
POLLUTION  TOXINS
FUNGUS  VIRUSES
PARASITES  BACTERIA

Immune System  IMMUNE RESPONSE
The Immune System

- Antigen
- Antibodies
- Complement
- Hypersensitivity
- Tolerance
Antigen

• Definition: any substance that causes the immune system to produce antibodies against it.
  – bacteria,
  – virus,
  – fungus,
  – parasite,
  – allergens,
  – chemicals,
  – toxins,
  – many (any) others
The Immune System

• Innate immunity
  – Skin, mucous
  – Macrophages, natural kills (NK) cells

• Acquired immunity
  – Cell mediated Immunity (T cells, B cells)
  – Humoral immunity (antibodies)
Cell Mediated Immunity

- T cells (thymocytes) originate from stem cells in the bone marrow and mature in thymus.
- T cells help with regulation and communication of the immune system.
- Four types of T cells:
  - T helper cells
  - T killer/cytotoxic cells
  - T suppressor/regulatory cells
  - T memory cells
T helper cells

- T helper cells orchestrate the entire immune response
  - $T_h1$: activates T killer/cytotoxic cells to kill pathogens
  - $T_h2$: activates B cells to produce antibodies to bind to pathogen
  - $T_h17$: produces IL-17 and IL-22, and causes excessive inflammation and tissue injury in autoimmune disease
T killer/cytotoxic cells

- They produce cytotoxin to cause cell lysis and apoptosis
- They kill pathogens (bacteria, virus, fungus, others)
- They kill damaged or dysfunctional cells
T suppressor/regulatory cells

- They suppress the continued or excessive immune system activities.
- They shut down T cell mediated immunity at the end of the immune reaction.
- They maintain homeostasis and tolerance to self-antigens.
T memory cells

• They remember the pathogen long after the pathogen is eliminated.
• In recurrent event, they quickly reproduce and initiate the immune response.
Humoral Immunity

- B cells originate from stem cells and mature in the bone marrow
- B cells do not fight the pathogen directly, but produce antibodies that bind to the antigen.
Antibodies

- Definition: they are immunoglobulins produced by B cells that bind to antigen and cause lysis, neutralization, agglutination and precipitation of the antigen.
- Types of antibodies
  - IgE: causes Type 1 allergic response
  - IgG, IgM, IgA, IgD: causes Type 2, 3, 4 inflammatory response
Complement

Activated when antibodies bind to antigens, complement is a group of proteins that help to clear pathogens through many mechanisms, including cytolysis, chemotaxis, opsonization, immune clearance, inflammation, and marking of pathogens for phagocytosis.
Cytokines

- Cytokines are proteins produced by immune cells (macrophages, B lymphocytes, T lymphocytes and mast cells) to coordinate between humoral and cell-based immunity.
- Cytokines include interferons, interleukins, lymphokines, tumour necrosis factor and chemokines.
- Cytokines balance between rest and response of the immunity to antigen.
  - Stimulant cytokines for activation and growth of cells: IL-2, IL-4.
  - Pro-inflammatory cytokines to induce inflammation, lysis and apoptosis: IL-1, IL-6, IL-8, TNF-alpha.
  - Regulatory cytokines on differentiation and growth of cells: IL-3, IL-7.
Pathogen

Barrier (skin, mucous); Cellular (macrophage, NK cells)

T_h1 (helper)  
T-killer cells  
T-memory  
Macrophage
- Pathogen
- Infected cells
- Old cells

T_h2 (helper)  
B cells  
Antibodies
Antigen
IgE binds to mast cells and basophils release histamine
Phagocytic cells engulf antigen
Complement binds to and destroys antigen

T-suppressor cells
Immune tolerance

• Immune system’s ability to distinguish between “self” and “non self.”
• Balance between hypo- and hyper-immunity
• Balance between T-helper and T-suppressor cells
Antigen

- **Exogenous antigens**
  - Bacteria, virus, fungus, parasite, allergens, chemicals, toxins, etc.

- **Endogenous antigens**
  - Cells that contain all or part of bacteria, virus, fungus, parasite, allergens, chemicals, toxins, etc.

- **Autoantigens**
  - A normal “self” protein that is mistaken by the immune system as “none self.”
Autoimmune diseases

• Normally the immune system’s army of white blood cells helps protect the body from harmful substances, called antigens. Example of antigens include bacteria, viruses [and] toxins…
• But in patients with autoimmune disorder, the immune system can’t tell the difference between healthy body tissues and antigens. The result is an immune response that destroys normal body tissues.
  – National Institute of Health (NIH)
Body Parts That Can Be Affected by Autoimmune Diseases

- Brain
- Eyes
- Mouth
- Spinal Cord
- Thyroid
- Lung
- Stomach
- Joints
- Pancreas
- Large Intestine
- Small Intestine
- Bladder
- Vagina

Others:
- Glands
- Muscles
- Nerves

- Trachea
- Blood and Blood Vessels
- Heart
- Skin
- Esophagus
- Liver
- Kidney
- Uterus
- Ovary
- Cervix

“The good physician treats the disease; the great physician treats the person who has the disease.”

– Sir William Osler, M.D.
Drugs for Autoimmune Disorders

• Corticosteroids
  – Prednisone, prednisolone, dexamethasone, triamcinolone and betamethasone

• Immune suppressants
  – Methotrexate (Trexall), cyclophosphamide (Cytoxan), azathioprine (Imuran)

• Biologics
  – Adalimumab (Humira), infliximab (Remicade), etanercept (Enbrel), abatacept (Orencia), rituximab (Rituxan)
Corticosteroids, effect

- Corticosteroid drugs
  - prednisone,
  - prednisolone,
  - dexamethasone,
  - triamcinolone,
  - betamethasone
- Strong effect to suppress inflammation
- Strong effect to suppress cell-mediated immunity
- Moderate effect to suppress humoral immunity
Corticosteroids, side effects

- Infection
- Urinary tract infection
- Herpes
- Oral candidiasis
- Water and fat retention
- Peptic ulcer disease
- Psychiatric and mood changes

- Osteoporosis
- Diabetes mellitus
- Hypertension increase weight
- Hyperlipidemia
- Pancreatitis
- Growth suppression
- Adrenal gland atrophy
Immune suppressants, effect

- Immune suppressant drugs:
  - methotrexate (Trexall)
  - cyclophosphamide (Cytoxan)
  - azathioprine (Imuran)
- Suppress immune system and response
- Suppress inflammation
- Treat autoimmune disorders
Immune suppressants, side effects

- Bone marrow suppression
- Liver and kidney damages
- Increased risks of infection
- Increased risks of cancer
- Hair loss
Biologics

• T-cell blocker
  – abatacept (Orencia)

• B-cell destroyer
  – rituximab (Rituxan)

• Anticytokine; Anti-TNF-alpha
  – adalimumab (Humira),
  – infliximab (Remicade),
  – etanercept (Enbrel),
Biologics, effect

• Potent and more precise effect to block T-cells, destroy B-cells, and inhibit specific inflammatory pathways
• Treats autoimmune disorders
Biologics, side effects

- Immune suppression
- Significant increase in risk of infection and cancer
- They are foreign antibodies that may trigger a separate autoimmune reaction
- Blood disorders (leukopenia, neutropenia)
Autoimmune Disorders and TCM

We Wish to Take You on A Journey Through Time...
Pathogen

Innate Immune Response:
Barrier (skin, mucous); Cellular (macrophage, NK cells)

Acquired Immune Response:
T cells, B cells

Acute Inflammation:
• Redness
• Warmth
• Swelling
• Pain

Chronic Inflammation:
• Cell lysis & apoptosis
• Tissues & organs destruction
• Loss of organs, functions

- Antigens
- Fungus
- Virus
- Toxins
- Allergens
“The sage does not wait for the disease to occur before treating it, but takes preventive measures in advance... To resort to treatment when a disease has already occurred... is just like digging a well when one is dying of thirst... Surely, is it not then too late?”
1. Avoid exposure to pathogens
2. Eliminate accumulated toxins and pathogens
3. Clear heat to treat acute and chronic inflammation
4. Nourish yin to repair tissue damages and restore normal forms
5. Move blood to treat fibrosis and scar tissues, and eliminate CIC
6. Dry dampness and eliminate phlegm
7. Tonify qi and yang to restore normal functions
1. Avoid exposure to pathogens

- Avoid exposure to environmental toxins
- Install air and water filters at homes
- Avoid contact with infected individuals
- Wear masks, wash hands
- Maintain moist mucous membrane
- Drink plenty of water and use humidifier
2. Eliminate accumulated toxins and pathogens

- Eliminate accumulated allergens and toxins from the blood and tissues
- Enhance liver metabolic function
- Improve kidney excretion function
2. Eliminate accumulated toxins and pathogens

- Eliminate accumulated allergens and toxins from the blood and tissues
  - *Lu Dou* (Semen Phaseoli Radiati) + *Gan Cao* (Radix et Rhizoma Glycyrrhizae)
  - *Lian Qiao* (Fructus Forsythiae) + *Fang Feng* (Radix Saposhnikoviae)
  - *Bai Mao Gen* (Rhizoma Imperatae) + *Da Huang* (Radix et Rhizoma Rhei)

- Enhance liver metabolic function
- Improve kidney excretion function
2. Eliminate accumulated toxins and pathogens

- Eliminate accumulated allergens and toxins from the blood and tissues
- Enhance liver metabolic function
  - *Xiao Chai Hu Tang* (Minor Bupleurum Decoction)
  - *Da Chai Hu Tang* (Major Bupleurum Decoction)
  - *Yin Chen Hao Tang* (Artemisia Scoparia Decoction)
  - *Ge Hua* (Flos Puerariae)
  - *Wu Wei Zi* (Fructus Schisandrae Chinensis)
- Improve kidney excretion function
2. Eliminate accumulated toxins and pathogens

- Eliminate accumulated allergens and toxins from the blood and tissues
- Enhance liver metabolic function
- Improve kidney excretion function
  - *Bai Mao Gen* (Rhizoma Imperatae) + *Huang Bo* (Cortex Phellodendri Chinensis)
  - *Huang Qi* (Radix Astragali) + *Lu Xian Cao* (Herba Pyrolae)
  - *Shan Zhu Yu* (Fructus Corni) + *Jin Ying Zi* (Fructus Rosae Laevigatae)
3. Clear heat in acute and chronic inflammation

- Clear excess heat associated with acute inflammation due to invasion of pathogens
- Clear deficiency heat associated with lysis and apoptosis of cells/tissues/organs
3. Clear heat in acute and chronic inflammation

- Herbs that clear heat
  - Select herbs based on *wei/qi/ying/xue* diagnosis
  - Select herbs based on pharmacology
3. Clear heat in acute and chronic inflammation

- **Wei, Qi, Ying, Xue Levels**
  - *Wei* (defensive) level
    - *Yin Qiao San* (Honeysuckle and Forsythia Powder)
  - *Qi* (energy) level
  - *Ying* (nutritive) level
  - *Xue* (blood) level
3. Clear heat in acute and chronic inflammation

- **Wei, Qi, Ying, Xue Levels**
  - **Wei** (defensive) level
  - **Qi** (energy) level
    - *Bai Hu Tang* (White Tiger Decoction), 321
    - *Huang Lian Jie Du Tang* (Coptis Decoction to Relieve Toxicity), 341
    - *Long Dan Xie Gan Tang* (Gentiana Decoction to Drain the Liver), 371
  - **Ying** (nutritive) level
  - **Xue** (blood) level
3. Clear heat in acute and chronic inflammation

- **Wei, Qi, Ying, Xue Levels**
  - Wei (defensive) level
  - Qi (energy) level
  - Ying (nutritive) level
    - Qing Ying Tang (Clear the Nutritive Level Decoction), 330
    - Qing Hao Bie Jia Tang (Artemisia Annua and Soft-Shelled Turtle Shell Decoction), 412
    - Zhi Bai Di Huang Wan (Anemarrhena, Phellodendron, and Rehmannia Pill), 636
    - Qi Ju Di Huang Wan (Lycium Fruit, Chrysanthemum, and Rehmannia Pill), 640
  - Xue (blood) level
3. Clear heat in acute and chronic inflammation

• *Wei, Qi, Ying, Xue* Levels
  – *Wei* (defensive) level
  – *Qi* (energy) level
  – *Ying* (nutritive) level
  – *Xue* (blood) level

  • *Xi Jiao Di Huang Tang* (Rhinoceros Horn and Rehmannia Decoction), 333
    – Note: Replace *Xi Jiao* (Cornu Rhinoceri) with *Shui Niu Jiao* (Cornu Bubali).

  • *Qing Wen Bai Du Yin* (Clear Epidemics and Overcome Pathogenic Influences Decoction), 337
3. Clear heat in acute and chronic inflammation

- Heat-clearing herbs that suppress immune system
  - *Di Huang* (Radix Rehmanniae)
  - *Xuan Shen* (Radix Scrophulariae)
  - *Zhi Mu* (Rhizoma Anemarrhenae)
  - *Shi Gao* (Gypsum Fibrosum)
  - *Ren Dong Teng* (Caulis Lonicerae Japonicae)
  - *Zhi Zi* (Fructus Gardeniae)
Zhi Zi (Fructus Gardeniae)

- **Immunosuppressive**: significant inhibition of human peripheral blood T cells and IL-2 secretion.\[i\]

- **Anti-inflammatory**: suppresses vascular inflammation via inhibition of tumor necrosis factor (TNF)-alpha.\[i\]

4. Nourish yin to repair tissue damages

- Increase generation of new cells/tissues
- New cells and tissues do not have antigen, and therefore will not trigger antibody production or autoimmune reactions
4. Nourish yin to repair tissue damages

- Select herbs based on zang/fu diagnosis
- Select herbs based on pharmacology

4. Nourish yin to repair tissue damages

• **Zang Fu** diagnosis
  – Heart / Small Intestine / Tongue / Blood Vessels
    • *Sheng Mai San* (Generate the Pulse Powder), 554, modified
      – *Mai Dong* (Radix Ophiopogonis)
      – *Di Huang* (Radix Rehmanniae)
      – *Wu Wei Zi* (Fructus Schisandrae Chinensis)
      – **Remove**: *Ren Shen* (Radix et Rhizoma Ginseng)
4. Nourish yin to repair tissue damages

• **Zang Fu** diagnosis
  – Spleen / Stomach / Mouth / Muscles
    • *Mai Men Dong Tang* (Ophiopogonis Decoction), 1043
    • *Sha Shen Mai Dong Tang* (Glehnia and Ophiopogonis Decoction), 1047
    • *Zeng Ye Tang* (Increase the Fluids Decoction), 1054
4. Nourish yin to repair tissue damages

• **Zang Fu** diagnosis
  
  – Lung / Large Intestines / Nose / Skin
  
  • *Bai He Gu Jin Tang* (Lily Bulb Decoction to Preserve the Metal), 1036
  
  • *Mai Wei Di Huang Wan* (Ophiopogon, Schisandra, and Rehmannia Pill), 642
  
  • *Du Qi Wan* (Capital Qi Pill), 644
4. Nourish yin to repair tissue damages

- **Zang Fu** diagnosis
  - Kidney / Urinary Bladder / Ear / Bones
    - *Liu Wei Di Huang Wan* (Six-Ingredient Pill with Rehmannia), 627
    - *Zhi Bai Di Huang Wan* (Anemarrhena, Phellodendron, and Rehmannia Pill), 636
    - *Qi Ju Di Huang Wan* (Lycium Fruit, Chrysanthemum, and Rehmannia Pill), 640
    - *Da Bu Yin Wan* (Great Tonify the Yin Pill), 649
    - *Zuo Gui Wan* (Restore the Left [Kidney] Pill), 645
4. Nourish yin to repair tissue damages

- Zang Fu diagnosis
  - Liver / Gall Bladder / Eyes / Tendons
    - Liu Wei Di Huang Wan (Six-Ingredient Pill with Rehmannia), 627
    - Zhi Bai Di Huang Wan (Anemarrhena, Phellodendron, and Rehmannia Pill), 636
    - Qi Ju Di Huang Wan (Lycium Fruit, Chrysanthemum, and Rehmannia Pill), 640
4. Nourish yin to repair tissue damages

- Yin-nourishing herbs with regulatory or inhibitory effect on humoral and cell-mediated immunity
  - *Di Huang* (Radix Rehmanniae)
  - *Xuan Shen* (Radix Scrophulariae)
  - *Mai Dong* (Radix Ophiopogonis)
  - *Tian Dong* (Radix Asparagi)
  - *Nan Sha Shen* (Radix Adenophorae)
  - *Bei Sha Shen* (Radix Glehniae)
Shu Di Huang (Radix Rehmanniae Praeparata)

- Hematopoietic: increases multiplication and differentiation of bone marrow hematopoietic cells (CFU-S and CFU-E).[i]
- Antisteoporotic: stimulates the proliferation and activities of osteoblasts and prevents osteoporotic bone loss.[ii]
- Renoprotective: relieves progressive renal failure.[iii]
- Neuroprotective: improves cognitive functioning by stimulating cholinergic enzyme activities and alleviating inflammatory responses.[iv]

**Mai Dong** (Radix Ophiopogonis)

- **Cardioprotective:** potent cardioprotective effect in cardiac cells.[i]

- **Anti-inflammatory:** exerts anti-inflammatory activity by inhibiting the release of the inflammatory chemokine,[ii] suppressant effects on nitric oxide production.[iii]

  
  
Tian Dong (Radix Asparagi)

• Hepatoprotective: protects against alcohol-induced hepatotoxicity via the suppression of tumour necrosis factor-alpha (TNF-alpha) secretion and the TNF-alpha-induced cytotoxicity.[i]

• Anti-inflammatory: suppresses the production of pro-inflammatory cytokines (tumor necrosis factor (TNF)-alpha, interleukin (IL)-1beta) to treat acute and chronic inflammation.[ii]

5. Move blood and eliminate blood stasis

- Reverses fibrosis
- Eliminates scar tissues
- Eliminates circulating immune complex (CIC)
- Treats vasculitis
- Relieves pain
- Facilitates overall healing
5. Move blood and eliminate blood stasis

- Select herbs based on sanjiao diagnosis
- Select herbs based on pharmacology
5. Move blood and eliminate blood stasis

- **Sanjiao** diagnosis
  - *Xue Fu Zhu Yu Tang* (Drive Out Stasis in the Mansion of Blood Decoction), 879
  - *Ge Xia Zhu Yu Tang* (Drive Out Blood Stasis Below the Diaphragm Decoction), 885
  - *Shao Fu Zhu Yu Tang* (Drive Out Blood Stasis in the Lower Abdomen Decoction), 889
  - *Shen Tong Zhu Yu Tang* (Drive Out Blood Stasis from a Painful Body Decoction), 893
  - *Tao Hong Si Wu Tang* (Four-Substance Decoction with Safflower and Peach Pit), 571
Chuan Xiong (Rhizoma Chuanxiong)

- Anti-inflammatory: inhibits TNF-alpha production and TNF-alpha bioactivity, and are promising agents in the treatment of inflammation and related diseases.[i]

Mu Dan Pi (Cortex Moutan)

- **Anti-inflammatory:** *Mu Dan Pi* significantly suppresses histamine release and prostaglandin D(2) synthesis from mast cells.\[i\]

- **Anticomplement:** The monoterpenoid glucosides from *Mu Dan Pi*, including suffrupaeoniflorin A and galloyloxypaeoniflorin, have been shown to exhibit anticomplement effects.\[ii\]

6. Dry dampness and eliminate phlegm

- Pleural effusion, pericardial effusion, edema, ascites, intracranial edema, ocular edema, exudation in the joints
  - *Ting Li Zi* (Semen Descurainiaei seu Lepidii), *Jie Zi* (Semen Sinapis), and *Sang Bai Pi* (Cortex Mori) reduce exudation and promote absorption of effusion.
7. Restore yang to increase adrenal gland functions, raise corticosteroids production

- Kidney yang tonic formulas as replacement for corticosteroids
  - *Jin Gui Shen Qi Wan* (Kidney Qi Pill from the Golden Cabinet), 668
  - *Ba Wei Di Huang Wan* (Eight-Ingredient Pill with Rehmannia), 672
  - *You Gui Wan* (Restore the Right [Kidney] Pill), 678
7. Restore yang to increase adrenal gland functions, raise corticosteroids production

- *Fu Zi* (Radix Aconiti Lateralis Praeparata)
- *Rou Gui* (Cortex Cinnamomi)
- *Lu Jiao* (Cornu Cervi)
- *Rou Cong Rong* (Herba Cistanches)
- *Yin Yang Huo* (Herba Epimedi)
- *Dong Chong Xia Cao* (Cordyceps)
- *Gui Ban* (Plastrum Testudinis)
- *Ge Jie* (Gecko)
Yin Deficiency

- *wei* level: excess heat

- Susac’s syndrome
- Sympathetic ophthalmia
- Takayasu’s arteritis
- Temporal arteritis/Giant cell arteritis
- Thrombocytopenic purpura (TTP)
- Tolosa-Hunt syndrome
- Transverse myelitis
- Type 1 diabetes
- Ulcerative colitis
- Undifferentiated connective tissue disease (UCTD)
- Uveitis
- Vasculitis
- Vesiculobullous dermatosis
- Vitiligo
- Wegener’s granulomatosis
Autoimmune diseases

1. Raynaud’s disease
2. Sjogren’s syndrome
3. Hashimoto’s thyroiditis
Raynaud’s disease

• A disorder characterized by periodic vasospastic attacks of pallor and coldness of the fingers, toes, ears and nose
• More common in women
• Onset in patients under 40 years of age.
Auguste Gabriel Maurice Raynaud, 1809-1877

The French doctor who discovered Raynaud's Disease, a rare vasospastic disorder which contracts blood vessels in extremities, in the late 19th century.
Clinical Manifestations

- Early phase: vasospasm with ischemic manifestations, such as pale skin, cold fingers, stabbing pain, numbness and rigidity of fingers.

- Late phase: skin swelling and cyanosis, turning dark blue or dark brown, with stabbing pain and throbbing sensation.
Etiology

- Cause: unknown
- Risk factors:
  - Emotional stress
  - Chronic exposure to cold environment
  - Smoking
  - Physical injuries
  - Drugs (beta blockers, ergotamine, sumatriptan, chemotherapy agents; and drugs that cause blood vessels to narrow
  - Certain chemicals, such as vinyl chloride
Pathology

• Exposure to pathogen
• Triggers the immune system to attack the blood vessels
  – Physiological change: increased vasoconstriction of the arteries and arterioles
  – Physical change: increased platelet activation, increased blood viscosity, impaired fibrinolysis
• Sudden attacks of pallor and coldness to the fingers, toes, ears and nose, lasting from minutes to longer than one hour.
Diagnosis

- Positive antinuclear antibody (ANA)
- Abnormal erythrocyte sedimentation rate (ESR)
- Vasospastic attacks of pallor and cyanosis
- Abnormal nailfold pattern
- Pitting scars, ulcers, or gangrene of the skin, fingers or toes
“In blood vessel *bi zheng* (painful obstruction syndrome), blood does not flow harmoniously in the vessels, leading to a change in color.”

- 吳謙  Wu Qian
TCM View of Raynaud’s phenomenon

- **wei level**: excess heat
- **qi level**: excess heat
- **xue level**: deficient heat
- **qing level**: deficient heat
- **Cold**
- **Qi stagnation**
- **Yin deficiency**
- **Blood stasis**
### Differential Diagnosis & Customized Treatment

<table>
<thead>
<tr>
<th>Impaired blood circulation due to vasocontriction and increased blood viscosity</th>
<th>Blood stasis</th>
</tr>
</thead>
<tbody>
<tr>
<td>More pallor with numbness of the affected area</td>
<td>Blood stasis with qi stagnation</td>
</tr>
<tr>
<td>More cyanosis with sharp stabbing pain</td>
<td>Blood stasis with cold</td>
</tr>
<tr>
<td>Warm/burning sensation of the body, cold and pain of the fingers and toes</td>
<td>Blood stasis with yin deficiency</td>
</tr>
</tbody>
</table>
Blood stasis

- *Xue Fu Zhu Yu Tang* (Drive Out Stasis in the Mansion of Blood Decoction), 879
- *Ge Xia Zhu Yu Tang* (Drive Out Blood Stasis Below the Diaphragm Decoction), 885
- *Shao Fu Zhu Yu Tang* (Drive Out Blood Stasis in the Lower Abdomen Decoction), 889
- *Shen Tong Zhu Yu Tang* (Drive Out Blood Stasis from a Painful Body Decoction), 893
- *Tao Hong Si Wu Tang* (Four-Substance Decoction with Safflower and Peach Pit), 571
Blood stasis with complications

- Qi stagnation
  - *Si Ni San* (Frigid Extremities Powder), 233

- Cold
  - *Dang Gui Si Ni Tang* (Tangkuei Decoction for Frigid Extremities), 494

- Yin deficiency
  - *Liu Wei Di Huang Wan* (Six-Ingredient Pill with Rehmannia), 627

- Localized toxic heat
  - *Si Miao Yong An Tang* (Four-Valiant Decoction for Well-Being), 1344
Blood movers with anti-inflammatory effect

- Chi Shao (Radix Paeoniae Rubra)
- Mu Dan Pi (Cortex Moutan)
- Dan Shen (Radix et Rhizoma Salviae Miltiorrhizae)
- San Leng (Rhizoma Sparganii)
- E Zhu (Rhizoma Curcumae)
- Shui Zhi (Hirudo)
Diet

• Cool and cold foods should be avoided because they will further impair blood circulation.

• Hot or spicy foods should also be avoided because they will generate internal heat.

• Eat neutral temperature foods, such as green vegetables, black jelly fungus, coarse food grain (such as maize, millet or bean).
Lifestyle

- Regular exercise to improve circulation and keep body warm.
- Avoid exposure to cold. Always keep the body and limbs warm.
- Stop smoking. Control stress.
Clinical Note

- Coldness with pallor and cyanosis appearance of the hands is not a symptom of qi or yang deficiency; but an indication of internal heat with qi or yang stagnation due to blood stasis.
- Therefore, treatment should focus on using herbs to invigorate blood circulation, move qi and yang, but not to tonify qi and yang.
- Note: Raynaud’s disease usually occurs prior to, or in conjunction with, other autoimmune disorders, such as scleroderma, Sjogren’s, SLE, etc.
Sjogren’s syndrome

• A disorder of the immune system identified by its two most common symptoms — dry eyes and a dry mouth.

• The mucous membranes are affected first, followed by destruction of the lacrimal and salivary glands.

• More common in women than men, 9:1.

• Usually diagnosed in people older than 40 yo.
Henrik Sjögren, 7/23/1899 - 9/17/1986

A Swedish ophthalmologist who first identified a group of women and correlated the triad of dry eyes, dry mouth and polyarthritis.
Clinical Manifestations

- Dry eyes due to destruction of lacrimal glands
- Dry mouth due to destruction of salivary glands
- Skin rashes or dry skin
- Vaginal dryness
- Persistent dry cough
- Prolonged fatigue
- Joint pain, swelling and stiffness
Etiology

• Cause: unknown
• Risk factors:
  – Genetics
  – Infection: bacteria or virus (i.e., EBV)
  – Environmental toxins
  – Smoking
  – Air travel
Pathology

• Pathogen triggers immune response
• Migration of lymphocytes to target organs
• Increased production of inflammatory cytokines (IL-2 and interferon-gamma)
• Increased inflammation and apoptosis of target organs
Diagnosis

• Diagnosis:
  – Sjögren’s syndrome antibody (anti-SSA)
  – Antinuclear antibody (ANA)
  – Elevated IgA, IgM, IgG, IgE, IgD.
  – Decreased tear and saliva production
Tongue Diagnosis
“[Pathogenic dryness] first damages the Lung channel, then Stomach fluids and finally Liver blood and Kidney yin.”

It can therefore be said that dryness symptoms are related to damage to the zang fu organs, in particular the Lung, Stomach and Kidney.

– 俞根初 Yu Genchu
TCM View of Sjögren’s Syndrome

- **wei** level: excess heat
- **blood stasis**
- **yin** level: deficient heat
- **qi** level: excess heat

• **Bai Mao Gen** (Rhizoma Imperatae)
• **Lu Gen** (Rhizoma Phragmitis)
• **Gou Qi Zi** (Fructus Lycii)
• **Shi Gao** (Gypsum Fibrosum)
• **Zhi Mu** (Rhizoma Anemarrhenae)
Diet

• Avoid hot and spicy foods
• Avoid foods that are warm or hot in nature.
• Drink tea made from *Wu Mei* (Fructus Mume) and *Gan Cao* (Radix et Rhizoma Glycyrrhizae) throughout the day.
• Eat sweet, cool, nourishing and moistening foods, preferably in liquid or semi-liquid form.
• Eat in small quantity several times daily.
Lifestyle

• Get adequate rest
• Avoid dry environment
• Use humidifier
• Avoid prolong exposure to TV and computers
• Use artificial tears and saline nose drops
• Drink fluids throughout the day
• Reduce frequency of shower/bath, avoid soaps with fragrance, use body lotion.
Hashimoto’s thyroiditis

- A chronic autoimmune disease of the thyroid gland characterized by destruction of the thyroid gland and reduced production of thyroid hormones.
- Also known as
  - Autoimmune thyroiditis
  - Chronic lymphocytic thyroiditis
Hakaru Hashimoto, 1881-1934

A Japanese physician who first described chronic thyroid disorder with diffuse lymphocytic infiltration, fibrosis and parenchymal atrophy.
Clinical Manifestations

- Goiter, pale face, fatigue, weight gain, sleepiness, loose stools, intolerance to cold, cold limbs, reduced body temperature, coarse dry skin, hair loss.
- Women: Men - 20:1
- Most common in middle ages of 40-50
Etiology

• Cause: unknown
• Possible factors:
  – virus
  – bacteria
  – heredity
  – sex
  – age
Pathology

• Pathogen activates the immune system
  – Increased T helper cells
  – Increased B cell
  – Increased production of antibodies against thyroglobulin, TSH receptors, TPO enzymes

• Increased inflammation causing destruction of thyroid cells and atrophy and fibrosis of the thyroid glands
Diagnosis

• Low T4, low T3, high TSH
• Antibodies against
  – Antithyroglubulin antibodies [anti-TG Ab]
  – Thyroid-stimulating antibodies [TSAb]
  – TSH receptors binding immunoglobulins [TBII]
  – Anti-thyroid peroxidase antibodies [anti-TPO Ab]
TCM View of Hashimoto’s thyroiditis

- Inappropriate diet or unhealthy lifestyle causing internal damage
- Spleen qi and yang deficiencies
- Kidney qi and yang deficiencies
TCM View of Hashimoto’s thyroiditis

- **wei level**: excess heat
- **xue level**: deficient heat
- **Yin Deficiency**
  - qi/yang def.
  - blood stasis
  - Phlegm
- **ying level**: deficient heat
- **qi level**: excess heat

The Effects of Traditional Antirheumatic Herbal Medicines on Immune Response Cells

DM Chang et al. J Rheumatol 24 (3), 436-441. 3 1997. more

OBJECTIVE: Clinically, some traditional Chinese herbal medicines have been thought to be effective in treating rheumatic diseases such as rheumatoid arthritis and systemic lupus erythematosus. To examine the mechanism by which such herbal remedies might be effective, we investigated the ability of Tripterygium wilfordii Hook-f (TWHf) and tetrandrine (TTD) to affect human immune responsiveness in vitro.

METHODS: We measured the ability of these agents to affect cytokine secretion from monocytes or T cells, prostaglandin E2 (PGE2) secretion from monocytes, IgG production from B cells, and the phagocytosis of bacteria by neutrophils.

RESULTS: These studies revealed that both TWHf and TTD significantly inhibited interleukin-1 (IL-1), tumor necrosis factor-alpha (TNF-alpha), IL-6, and IL-8 secretion from monocytes, IgG secretion from B cells, and phagocytosis of bacteria by neutrophils; however, only TWHf inhibited IL-2 and IL-4 production from lymphocytes, and PGE2 secretion from monocytes.

CONCLUSION: TWHf and TTD exert a powerful suppressive effect on human immune responses. This action might account for their therapeutic effectiveness in rheumatic diseases, and might support broader and more rigorous clinical trials.
Current Events

• *Lei Gong Teng* (Radix Tripterygii Wilfordii)
Lei Gong Teng (Radix Tripterygii Wilfordii)

- **Immunosuppressive and antirheumatic:** *Lei Gong Teng* is a herb with an immunosuppressive effect that inhibit the expression of proinflammatory cytokines, proinflammatory mediators, adhesion molecules, and matrix metalloproteinases by macrophages, lymphocytes, synovial fibroblasts, and chondrocytes. It is considered an alternative disease modifying anti-rheumatic drug (DMARD) for the patients with rheumatoid arthritis refractory to conventional therapy.[i]

[i] Bao J, Dai SM. A Chinese herb Tripterygium wilfordii Hook F in the treatment of rheumatoid arthritis: mechanism, efficacy, and safety. Department of Rheumatology & Immunology, Changzheng Hospital, Second Military Medical University, Shanghai, China. Rheumatol Int. 2011 Mar 2.
**Lei Gong Teng** (Radix Tripterygii Wilfordii)

- In a multicentre, open-label, randomised controlled trial, 207 patients with active rheumatoid arthritis were divided into three groups: *Lei Gong Teng* only, methotrexate only, or *Lei Gong Teng* and methotrexate. After 12 weeks of treatment, the researchers evaluated and concluded that treatment with *Lei Gong Teng* or methotrexate with *Lei Gong Teng* showed comparable effectiveness, and both are better than methotrexate as monotherapy.[i]

Researchers discover treatment for lethal kidney disease

A treatment for polycystic kidney disease (PKD), a leading cause of fatal kidney failure worldwide, has been identified by a research team led by Yale biochemist Craig Crews, according to a report in the Proceedings of the National Academy of Sciences.

Over 12 million people worldwide suffer from PKD, a genetic disorder that causes uncontrolled growth of cells lining tubules in the kidneys, resulting in the formation of many large fluid-filled cysts in the kidneys.

"Unfortunately, aside from kidney transplantation, there has been no cure for PKD, nor has there been a suitable drug treatment to slow its progression," says Crews, associate professor of chemistry, and of molecular, cellular and developmental biology, and of pharmacology. People with PKD have a shortened life expectancy and require life-long treatment. "We hope that is about to change," he adds.

Crews has been studying a variety of traditional Chinese medicines (TCMs) in order to understand the biology and chemistry of how they work. Lack of knowledge of these processes, he says, has been a roadblock in the adaptation of TCMs for medical treatments in the West.

Crews and colleagues showed that a substance called triptolide causes cell growth arrest in certain cell types. Triptolide is a potent, biologically active compound isolated from the medicinal "Thunder God Vine," Tripterygium wilfordii Hook F. The plant is in the TCM tea Lei Gong Teng, which has been used for centuries as a therapeutic against cancer, inflammation and auto-immune diseases.
Lei Gong Teng (Radix Tripterygii Wilfordii)

- Also known as “qi bu shi,” literally seven steps to death.
Toxicities

- Adverse reactions: local irritation of the gastrointestinal tract, damage to the central nervous system, internal bleeding and necrosis of the organs.
- Gross overdose may cause bleeding in the stomach, intestines, liver and lungs. Other symptoms include dizziness, dry mouth, palpitations, necrosis of mucous membranes and irregular menstruation.[i]

[i] Zhong Yao Du Li Xue (Toxicology of Chinese Herbs) 1989;154-155.
Antidote

- General toxicity of the herb may be treated with the following herbs in decoction:
  - *Lu Dou* (Semen Phaseoli Radiati) 120 grams and *Gan Cao* (Radix et Rhizoma Glycyrrhizae) 30 grams.
  - *Feng Wei Cao* (Herba Pteris) 90 grams.
  - *Wu Jue* (Folium Stenolomatis) 60 grams.
  - *Xian Di Huang* (Radix Rehmanniae Recens) 90-100 grams.[i],[ii]

Current Events

- *Chang Shan* (Radix Dichroae)
Chang Shan (Radix Dichroae)

- **Anti-inflammatory and immunosuppressant:** Halofuginone, a febrifugine derivative from *Chang Shan*, showed great promise to treat autoimmune disorders by preventing inflammatory pathology without inducing generalized immunosuppression.

- Halofuginone inhibits T helper 17 (Th17) cell differentiation by activating the amino acid starvation response to exert a potent and selective regulation of inflammatory T cell differentiation *in vivo*. According to the researchers, halofuginone holds great promises in the treatment of certain types of autoimmune and inflammatory diseases, such as inflammatory bowel disease, rheumatoid arthritis, multiple sclerosis, type 1 diabetes, eczema, and psoriasis.[i]

Chang Shan (Radix Dichroae)

An Ancient Herbal Remedy

An extract of the blue evergreen hydrangea suppresses autoimmune reactions.

by Dan Morrell
May-June 2012
Toxicities

- Overdose reactions generally occur 30 minutes to 2 hours after the ingestion of the herb. Early reaction is characterized by nausea, vomiting, abdominal pain, diarrhea, blood in the stool, and upper gastrointestinal bleeding. In severe cases, there may be palpitation, irregular heart beat and rhythm, and possibly death.\[[i],[ii]\]

Antidote

- Overdose of *Chang Shan* (Radix Dichroae) may be treated with the following herbal decoction:
  - *Chen Pi* (Pericarpium Citri Reticulatae), *Ban Xia* (Rhizoma Pinelliae), *Fu Ling* (Poria), *Zhi Shi* (Fructus Aurantii Immaturus), *Zhu Ru* (Caulis Bambusae in Taenia), *Gan Cao* (Radix et Rhizoma Glycyrrhizae) and post-decocted *Da Huang* (Radix et Rhizoma Rhei), 9 grams each.[ii]

- *Gan Cao* (Radix et Rhizoma Glycyrrhizae) 45g and *Lu Dou* (Semen Phaseoli Radiati) 60g.

- *Gan Cao* (Radix et Rhizoma Glycyrrhizae) 30g, *Sheng Jiang* (Rhizoma Zingiberis Recens) 30g, *Huang Qin* (Radix Scutellariae) 9g, and *Da Zao* (Fructus Jujubae) 10 pieces.

- *Bai Fan* (Alumen) 3g, *Da Huang* (Radix et Rhizoma Rhei) 15g and *Gan Cao* (Radix et Rhizoma Glycyrrhizae) 15g.[iii]

Stress

- Chronic stress triggers the release of IL-6, a strong pro-inflammatory cytokine.
When one is joyous, qi is in harmony and the mind is unimpeded. Nourishing qi and protective qi pass freely.

When one is sad, the heart connection is tense and the upper burner is impassable. Ying and wei do not disperse.
